

Eli Lilly - Financial Analysis & Scenario Modeling

Type: Independent Finance Project

Company: Eli Lilly and Company (NYSE: LLY)

Tools: Excel | Power BI | PowerPoint

Period: FY2025A–FY2030E

Objective

Develop an integrated FP&A and financial analysis model evaluating Eli Lilly's historical performance, FY2026 guidance versus actual performance, and FY2030 growth scenarios, with particular focus on the company's GLP-1 franchise.

.

Key Workstreams

- Scenario analysis
- Dynamic revenue CAGR sensitivity

03 - Management / Investment Presentation | PowerPoint

- Business and growth drivers
- FY2026 guidance progression
- Critical Dynamics Shaping the Outlook
- Management Implications & Strategic Takeaways

Equity Research & Valuation

Objective

Build a bottom-up valuation of a real public company, going beyond a standard DCF template to develop a complete valuation framework including DCF, WACC, trading comparables and sensitivity analysis. Moreover, translate the results into a defensible investment recommendation with bull/base/bear scenarios supported by SEC filings, company guidance and current market data.

Key Workstreams

01 - Valuation Modeling | Excel

- Historical + 5 year forecast financials carried forward from the companion FP&A model
- WACC via CAPM
- DCF (unlevered FCF build, Gordon Growth terminal value, EV to EQUITY VALUE)

reconciliation)

- Trading comparables vs. 4 large-cap pharma peers with a growth adjusted PEG cross-check
- Sensitivity analysis across WACC, terminal growth, beta and equity risk premium
- Blended target price, Bull / Base / Bear scenarios and a final BUY / HOLD / SELL call

02 - Equity Research Report | Word Doc

- Company & industry overview (business lines and competitive landscape)
- Financial Analysis of historical performance and forecasted performance
- Valuation Metrics
- Investment Thesis of BULL/BASE/BEAR
- Key Risks
- Recommendations
